

Attachment for Reach Trucks

Reach Truck Attachments - Reach trucks are loading devices used by varieties of establishments that maintain a stockroom facility or circulation center relating to the organization of completed merchandise and materials on pallets which are inserted into elevated shelving units. This device provides straightforward and safe retrieval of the loaded pallets whilst ensuring efficient storage of goods that are not required right away.

Normal reach trucks are built with a mounted rigging apparatus on the face of the truck. Telescoping forks are able to travel up and down on this mounted rigging. A system using hydraulics allows the operator pick up and even reposition the load over the outriggers. This design delivers a more level balance of the weight and facilitates better maneuvering among the warehouse shelves and small aisles.

After arriving at the particular shelves intended for the pallet, the hydraulics permit the forks to swing and slide the pallet into position. A reach vehicle will usually fit into an aisle less than 10 feet across without any problem so long as there are no obstacles protruding from the shelving.

There are many different models of reach truck on the market. The simplest unit is a stand up model that you can slide the forks beneath the pallet and then move it to a different site for storage, then slide it into place. Typically this type of reach truck is good for shelving units that are only one pallet deep. A double-reach vehicle works in the same basic way as the stand-up type however uses telescopic forks that are lengthy enough to slide a pallet into shelves that accommodate two pallets. Straddle reaches are a different reach truck variation. This mode of reach truck slides beneath the pallet and is additionally able to grab the sides as well. The straddle reach unit is advantageous when grasping the sides of the pallet and merchandise will not result in damage. They permit simple pallet retrieval of a pallet that may be 4th or 5th in line and are helpful when the shelving units are within reach in more than one direction.

Warehouses, manufacturing facilities and fabric companies repeatedly use a number of types of the reach truck. Using a reach truck to stock provisions, pallets of finished commodities, and in general to keep the storage area in order is a familiar practice. Easy to work, the reach truck can help make better use of both time and accessible stockroom space.
