

Cushion Tire Forklift Part

Cushion Tire Forklift Parts - Cushion tires are a solid tire with a smooth profile. Its' tread is bonded to a steel ring so as to shape the tire, and the tire is pressed onto a hub that is affixed to the forklift. These tires are suited for use in smooth floor warehouses and are obtainable in different polyurethane or rubber compounds.

Consisting of polyurethane, a poly tire is an extremely solid tire. These types of tires are used as a substitute for cushion tires whenever there is a higher load capacity than can be acquired making use of a cushion tire and those applications which require a lower steering effort. Poly tires obtainable in a variety of hardness ratings to be able to meet different particular application requirements. Narrow Aisle models and Orderpicker lift trucks will normally use small diameter poly tires for their outrigger load wheels.
